Task 1 – Create an HTML Page

I have learned about how to use the Codepen and JS Fiddle. Here I have learned how to write a simple HTML page with elements such as header, paragraph, division, list and form.

Task 2 – Add CSS to your HTML page

I have added inline and internal CSS. As I used the JS Fiddle, I did not know how to add a reference of external CSS file.

Task 3 – Adding JavaScript

I added a simple JavaScript form and added few functions. For example, to list out the marks for a student and adding the values to get a total score.

Task 4 – Vue.JS Framework

This was not covered as a part of practical one.
